

**Sustainable
Southwest Beef**
knowledge and tools for
ranch and rangeland resilience

TOOLS FOR THE BEEF INDUSTRY (TOBI)

Decision Support

TOBI is a decision support tool library, designed to make it easier to quickly search and compare tools from across the web, published by a variety of different developers.

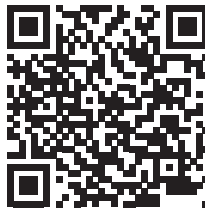

Searchable Database

TOBI searches a database of over 550 decision support tools and resources related to the beef industry from cooperative extension, domestic and international universities and government agencies, NGOs, and private developers.

Search can be filtered by platform (e.g., smartphone app, spreadsheet, etc.), topic, user type, and/or keyword search.

DISCLAIMERS

All tools listed in the database are third-party. The Sustainable Southwest Beef Project was not involved in the development, testing, or research associated with any of the tools in the database.

No warranty, recommendation, or endorsement is made for any tool listed in the database. Lack of inclusion does not imply a less desirable tool.

Platform

Application (94)	Hardware (5)	Reference Material (1)	Software (3)	Spreadsheet (0)
------------------	--------------	------------------------	--------------	-----------------

Topic

Animal and Feed Performance (51)	Crop Management (7)	Environmental Footprint (0)	Finance (18)	Livestock Management (94)
----------------------------------	---------------------	-----------------------------	--------------	---------------------------

Audience

Consumers (4)	Producers (94)	Researchers and Technical Service Providers (4)
---------------	----------------	---

AgriWebb

AgriWebb
This tool contains several features including farm management, task management, individual weight insights, inventory management, grazing management, weight goals, pasture management, and more.
<https://www.agriwebb.com/au/>

AgroWeather

AgroWeather
This agricultural weather tool indicates the ideal time to fertilize, irrigate, spray, or optimize the welfare of your animals.
<https://www.appsforagri.com/en/Apps/agroweatherapp/>
